What is sweet corn?

Sweet corn is the type of corn that makes it to your table. It can be corn on the cob or cut corn from the freezer or a can. It is sweeter than other varieties which is why it's the kind we choose to eat!

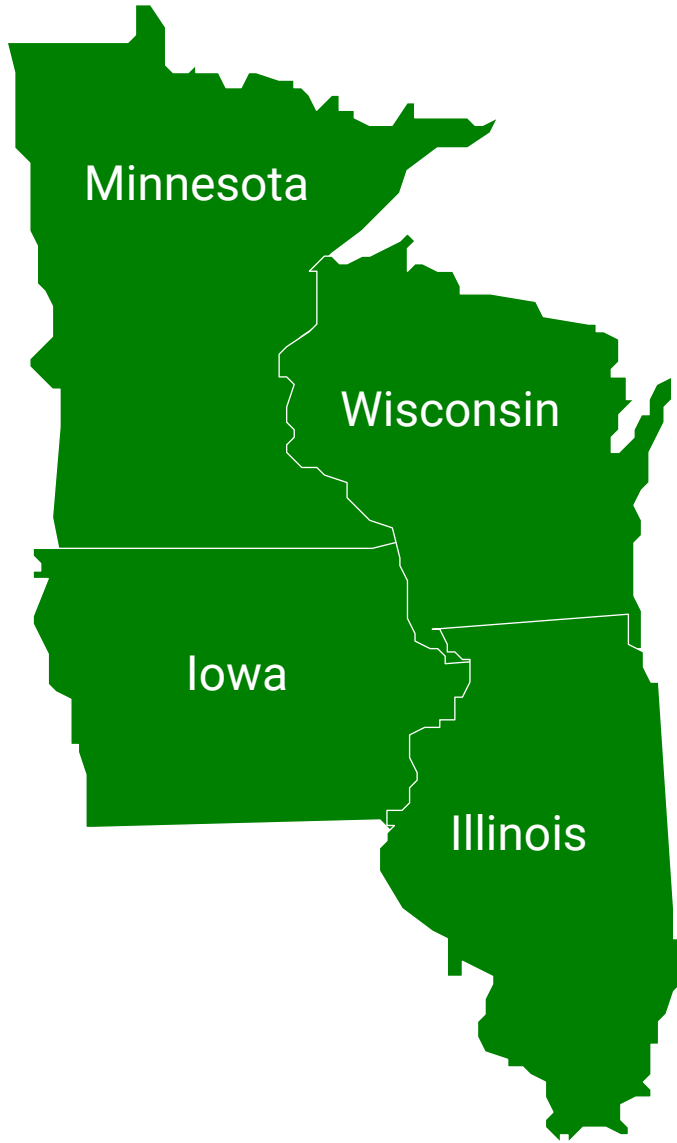

Other varieties of corn are used to make cornmeal, chemicals and for animal feed.

Parts of a Corn Plant

Where is sweet corn grown?

**In our
backyards!**

When is sweet corn grown?

Spring (March 1 – May 31)

- Planting the corn seed begins in the spring, around early May

Summer (June 1 – August 31)

- By the end of June planting is complete
- Around August 1st we start harvesting the corn from the field

Fall (September 1 – November 30)

- Corn harvest continues well into October

Winter (December 1 – February 28)

- Canning sweet corn during the summer and fall seasons allows us to enjoy it all year long!

How is sweet corn processed?

- Production for sweet corn ramps up by late July with all Seneca locations running by early August.

- Eight strategically located facilities throughout the Midwest process sweet corn to ensure field to fork freshness.
